

Beginner Origami Frog Instructions

Crease: A line created on the paper after folding it. Creases help fold more neatly and accurately

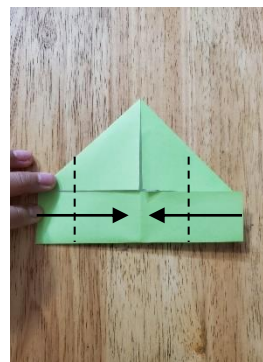

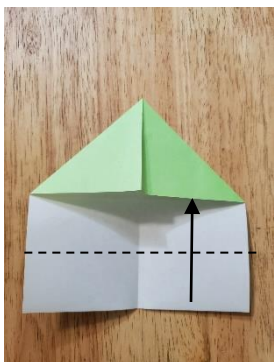

1. Fold square in half horizontally and vertically to create crease lines.

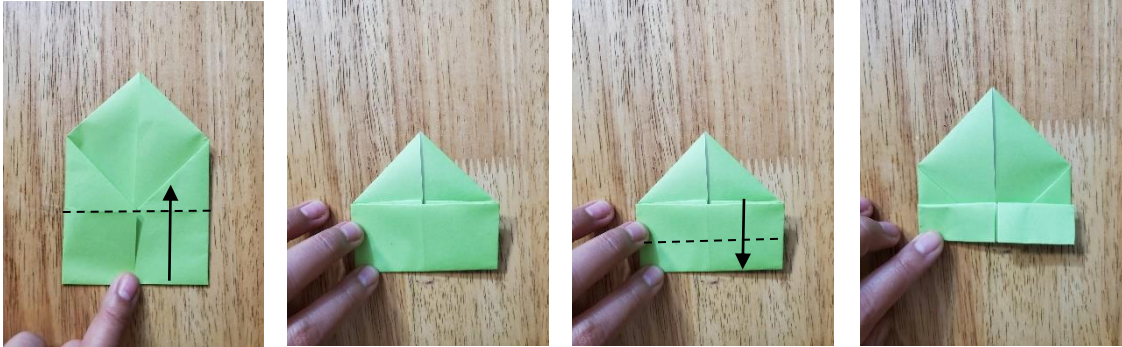

2. Unfold, then fold the top left-hand corner and top right-hand corner to the centre (where the vertical and horizontal creases meet) to make a house with a roof.

3. Fold the bottom section up to meet the roof, then fold the left and right sides to the centre.

4. Fold the bottom section up using the horizontal crease, so it forms another house. Then fold the rectangle in half horizontally to create the spring.

5. Flip frog over and place pointer finger on the spring. Pull backward and release to make frog jump.
